

Thinking of getting a tattoo?

Put your money where your mouth is!

Permanent cosmetics are non-surgical techniques in which a tiny amount of pigment is placed under the top layer of the skin, simulating the effect of makeup. This allows for a safe and long lasting method of defining the facial features. The procedures are performed under topical anesthesia. The recovery time is typically minimal and the results are visible instantly. Once the skin heals over the inserted pigment, it seals the makeup inside. Protected by the skin, the makeup is care-free, waterproof, will not smudge or run and can last for years. Sometimes touch-ups are needed to maintain the vibrancy of the color.

Typically, permanent cosmetics procedures are performed on the eyebrows, eyes and lips. Changing the shape, fullness and definition of the eyebrow emphasizes and lifts the eyes, frames the face, adds balance and symmetry. Adding permanent eyeliner makes lashes appear fuller and thicker. Subtle definition can be added to the eyes, making eyes appear larger and more striking. Lips can be enhanced to appear fuller and more defined, adding youth and sensuality.

Experience and artistic ability are the keys to selecting the right permanent makeup artist. It's also important to select someone in your vicinity in case you need touch ups after the initial procedure. Find someone with complimentary consultations along with mini makeovers to demonstrate what permanent makeup can do for you. ■
