Laser Hair Removal... Bikini Approved

Let's face it — if you're thinking about wearing a swimsuit, whether to the beach or to the pool, you know you'll have to take care of your bikini line. For many women, removing hair from the bikini line is always important — swimsuit or not — but it can be difficult to decide the best method of doing so in such a sensitive area. Waxing and shaving are methods many dislike due to the irritated skin, ingrown hairs, scratchy stubbly re-growth and discomfort.

Today's latest technology of laser hair removal, the Elos system, introduces bipolar radio frequency making it possible to remove unwanted body hair, even lighter hair, safely, gently and permanently. Within five to eight treatments, spaced 6-8 weeks apart, the Elos system removes unwanted hair with no side effects and no down time. Gender, age, ethnic origin and hormonal status may vary the number of treatments needed.

Simple bikini hair removal takes the least amount of time and only removes hair along the bikini line that is visible while wearing underwear. In today's world of super models and skimpy bathing suits, it's very likely that you've heard of Brazilian hair removal. For some, it's very sexy and it's all the rage. Men and women alike have asked for this exotic level of permanent hair removal and for all kinds of reasons. Some say they feel cleaner, some enjoy intimate activities more and others just want to try something new and different. Whichever you prefer, laser hair removal is the answer. ■
